DRAWINGS & PERMITS

Our structures come standard with generic drawings upon request. We highly recommend that all customers check with their local building permit office to determine what requirements are required by your local permitting office. Our generic drawings are engineered to meet wind and snow for our coverage areas however some permitting offices require "Site Specific" drawings. Please inquire for more information on site-specific drawings.

Some questions to ask your local permitting office:

- *Am I required to have site-specific drawings for my size building or will generic engineered drawings be sufficient?*
- *Am I required to get a building permit?*
- *Is there a maximize size building for my specific building site?*
- *Are there property line offset requirements?*
- *Can I install my structure where I want to put it on my property?*

For Drawing / Permit Questions: drawings@custombuiltstructures.com / 877-552-7020

- Can be Homeowner or Renter
- No Penalty for Early Pay-off
- No Minimum Required

FREQUENTLY ASKED QUESTIONS

Q: What surfaces can a structure be installed on?

A: We can install on any level surface, such as concrete, asphalt, dirt/ground, and gravel. Reach out to an authorized dealer about what is possible when you choose Custom Built Structures to build for you.

Q: How level does my land need to be for installation?

A: Your installation site should be level with a 1-3" tolerance. If your site is out of level greater than 3" then you should prepare your site before installation so that it's level. We highly recommend you speak with a local gravel or concrete contractor so that you can decide the best foundation for your structure based on your budget and use.

Q: What types of anchoring comes with my structure?

A: All of our structures come with the anchoring that matches the surface type. Installation on ground comes with rebar and 3-ft mobile home anchors, while concrete surfaces come with concrete anchors. Asphalt comes with asphalt anchors. Custom anchoring requirements beyond ground/gravel, concrete, or asphalt may be subject to an additional installation fee for labor and material.

Q: How long does it take to get my structure installed?

A: Once your order has been placed it will be reviewed for pricing accuracy and sent to the scheduling department. You will be assigned a scheduling contact person. You will receive a phone call (and/or email/text) to see if are ready for installation. Typically this will be 2-4 days prior to one of our installation crews being in your area. Due to the volume of customers inquires you will not receive contact until our crews will be coming through your area. It is important to accept calls from our office when we call so that way we know you are available. Missed scheduling calls could result in rescheduling delays and potential reschedule or return-trip fees.

Q: What size concrete should I pour for my structure?

A: All Concrete Pads are Recommended to pour 2" wider on all sides. Units 18x20 need to have 18'4"x20'4" Concrete Pad. We recommend that you work with an experienced concrete professional to guide you on how to pour your concrete pad based on your setup and needs. The recommended depth of your concrete pad and other general ideal concrete guidance will vary depending on your area. Be sure to check with your local permitting office to ensure you are within their guidelines for your concrete pad and structure.

Q: Do I need a building permit?

A: Depending on the use, location and size of your structure - you may need to obtain a building permit. All customers should check with their local permitting office to see if their structure will be within local code and, if required, be able to obtain a permit. Custom Built Structures, Inc does not obtain permitting on behalf of customers. It's important to notify your local permitting office to obtain your requirements and guidelines to follow. We proudly build to meet local building codes, be sure to specify on your order any building code requirements to ensure proper pricing for your code requirements.

STANDARD CARPORT

12' - 24' WIDE

Vertical Style

*Prices are subject to change without notice and may be subject to surcharge. Check our website for current information.
*Return trip and labor fee will be added to any additional order. *Orders over \$7,500 require site pictures prior to scheduling install.

- **Extra Downspout \$100/ea**

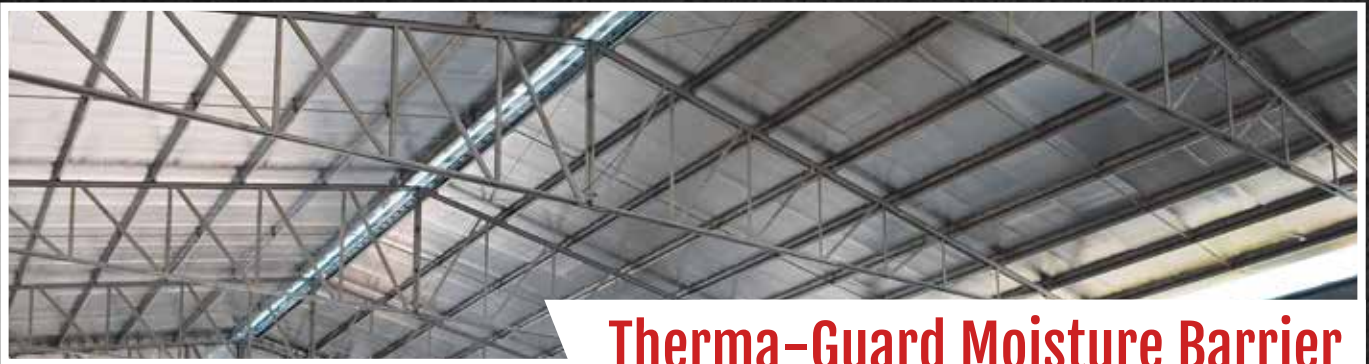

Gutter orders must be paid in full prior to installation.
No Discounts Allowed.
Must be on separate order form.
No dealer commission collected on gutters.

INSULATION OPTIONS

Double Bubble Moisture Barrier

This type of insulation is a moisture barrier made up of polyethylene air bubbles with a layer of metalized film backing. It is designed to prevent moisture from penetrating the building and can help regulate temperature.

Therma-Guard Moisture Barrier

This is a type of rigid board that is like insulation in that it is made from fiberglass or foam plastics like polystyrene. It is installed between the metal panels and provides excellent thermal insulation.

House Wrap Moisture Barrier

This type of insulation is typically used as a weather barrier and is installed over the metal panels. It helps prevent air infiltration and can help regulate temperature.

Closed Cell Spray Foam Insulation

This type of insulation is sprayed directly onto the metal panels and expands to fill any gaps or voids. It provides excellent thermal insulation and can help prevent air infiltration. Offered in 2" or 1". Add 5% surcharge if over 3 hours from Mt Airy, NC. Surcharge is taxed but not commissionable. 13-ft & taller require a lift. No discounts.

2" Fiberglass Insulation

This is a type of blanket insulation that is made from fiberglass. It is installed between the metal panels and provides good thermal insulation.

Insulation Pricing

Closed Cell 2" Spray Foam Insulation R-value = 14w	\$3.25 per sq. ft.
Closed Cell 1" Spray Foam Insulation R-value = 7	\$2.25 per sq. ft.
2" Fiberglass Insulation R-value = 6	\$2.25 per ft.
Double Bubble Moisture Barrier No R-value	\$1.75 per ft.
Therma-Guard Moisture Barrier No R-value	\$2 per ft.
House Wrap Moisture Barrier No R-value	\$1.25 per ft.
